The invention relates to the use of a hepatitis C virus (HCV) vaccine composition for reducing liver disease (such as liver fibrosis or its C progression), serum alanine aminotransferase (ALT) levels, steatosis, or canti-E2 immunoreactivity in the liver of a chronic HCV-infected mammal, and or for treating a chronic HCV-infected mammal. The liver disease is creduced by at least 1-2 points according to the overall Ishak score in the HCV-infected mammal. Also included are a method for predicting CC changes in liver disease in a chronic HCV-infected mammal, a therapeutic CC HCV vaccine composition (comprising at least one purified or a combination of at least 2 HCV single or specific oligomeric recombinant E1 or E2 protein, a part of E1 and E2 proteins, an E1/E2 protein complex formed from purified HCV single or specific oligomeric recombinant E1 or E2 proteins or its parts and complex formed from purified HCV single or specific oligomeric recombinant E1 or E2 proteins or its parts and complex formed from purified HCV single or specific oligomeric recombinant E1 or E2 proteins or its parts and composition (comprising a pharmaceutical adjuvant), a composition (comprising a least one E1 or E2 peptide, and optionally, a pharmaceutical adjuvant) and an HCV vaccine composition (comprising a recombinant virus allowing expression of at least one HCV recombinant envelope protein and/or an E2 protein, and parts of the E1 and E2 proteins and composition is useful for reducing liver disease (such as liver fibrosis or its cuseful for reducing liver disease (such as liver fibrosis or its cuseful for mammal, particularly human. The HCV vaccine composition is cuseful for mammal, particularly human. The HCV E1 proteins are useful for in vitro monitoring HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is an HCV cDNA encoding an E1 protein (or fragment).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Use of hepatitis C virus (HCV) vaccine composition for reducing disease, serum alanine aminotransferase levels, steatosis, or arimmunoreactivity in the liver of a chronic HCV-infected mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Disclosure; SEQ ID NO 49; 176pp; English.

                                                                                                                                                                                                                                                                                                                                CC are: a pharmaceutical preparation comprising (I); reducing (M) app8-100 CC levels or glucose-6-phosphatase levels in a subject; producing (M) app8-100 CC introducing (I); involves selecting a sequence with activity and CC introducing one or more asymmetrical modification in the sequence, where CC the modification decreases nuclease sensitivity while not decreasing its CC activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I) is useful for reducing apo8-100 levels or glucose-6-phosphatase levels. (M1) is useful for reducing apo8-100 levels or glucose-6-phosphatase levels. (M2) CC is useful for reducing apo8-100 levels or glucose-6-phosphatase levels. (M3) CC is useful for reducing apo8-100 levels or glucose-6-phosphatase levels. (M3) CC devels of cholesterol, and/or disregulation of ipid metabolism. The CC disorder is chosen from the HDL/LDL cholesterol imbalance, CC dyslipidaemia, hypercholestorolaemia, statin-resistant CC disease (CHD) and atherosclerosis. (I) is administered to a subject to CC disorder is chosen from the HDL/LDL cholesterol imbalance, CC disease (CHD) and atherosclerosis. (I) is administered to a subject to CC disease (CHD) and atherosclerosis. (I) is administered to a subject to CC disease (CHD) and atherosclerosis. (I) is administered to a subject to CC treating the disease as mentioned above, cancer (e.g. breast, colon or CC treating the disease as mentioned above, cancer (e.g. breast, colon or CC spinocerebellar ataxia) or viral disease (e.g., Huntington disease or copresents hepatitis C virus type 1b polyprotein DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence is that of NANB hepatitis virus polynucleotide N-2540-2 which codes for a non-A, non-B (NANB) hepatitits virus gene HC-OM. The polypeptide it encodes may be used in a system for detecting NANB hepatitis. This method is highly specific and sensitive, and can detect NANB hepatitis virus which could not be detected by conventional methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antigen related to non-A and non-B hepatitis virus - comprises non-translation region comprising 340 - 341 mols. of nucleotides, non-translation region comprising 1885 - 2551 mols. of nucleotides including region 1,149 and, etc.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector Direct Submission Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage : FRÂNCE (B-mail : segref@genoscope.cns.fr Drosophila melanogaster (fruit fly)

                                                                source
                                                                                             Determination of this BAC-end sequence was carried out as part of a collaboration with the Barkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part collaboration with the Berkeley Drosophila Genome Project (BDGI The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and

Determination of this BAC-end sequence was carried out as parcollaboration with the Berkeley Drosophila Genome Project (BD)
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's p1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
Web: www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part collaboration with the Berkeley Drosophila Genome Project (BDGF)

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 5, Application US/08191160
Patent No. 6210675
GREERAL INFORMATION:
APPLICANT: Highfield, Peter Edmund
APPLICANT: Rodgers, Brian Colin
APPLICANT: Rodgers, Brian Colin
APPLICANT: Rodgers, Brian Colin
APPLICANT: Rodgers, Brian Colin
APPLICANT: Barbara, John Anthony James
TITLE OF INVENTION: Viral Agent
NUMBER OF SEQUENCES: 25
CORRESPONDENCE ADDRESS:
ADDRESSEE: Rothwell, Figg, Ernst & Kurz
STREET: 1700 K Street
COUNTRY: Washington
STATE: D.C.
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy diskette, 5.25 inch, 360 Kb storage
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy diskette, 5.25 inch, 360 Kb storage
COMPUTER SYSTEM: MS-DOS V3.2
SOFTWARE: Wordperfect 5.0 (DOS text)
CURRENT APPLICATION NUMBER: US/08/191,160
FILING DATE: 07/628,516
FILING DATE: 17 DEC 1990
APPLICATION NUMBER: US/08/191,160
FILING DATE: 18 DEC 1990
APPLICATION NUMBER: UK 90 04 414.0
FILING DATE: 18 DEC 1989
PRIOR APPLICATION NUMBER: UK 90 04 414.0
FILING DATE: 18 DEC 1989
PRIOR APPLICATION NUMBER: UK 90 04 414.0
FILING DATE: 27 FEB 1990
ATTORNEY/AGENT INFORMATION:
NAME: E. Anthony Figg
REGISTRATION NUMBER: UK 90 04 814.1
TELEPHONE: (202) 833-5740
INFORMATION FOR SEQ ID NO: 5:
SEQUENCE CHARACTERISTICS:
LENGTH: 834 base pairs
TYPE: nuclectide with corresponding protein
